My Proudest Achievement

So, before coming for my masters here in Dublin, I got an opportunity to work with DXC Technology in the insurance domain (Homeowner's). Here, I was offered with many opportunities but the one that I love the most and I personally think that I was able to achieve the most out of it was when I was given a task by my Team lead to implement Replacement cost Estimator.

So, let me give a brief about RCE. Whenever a user wanted to register for a policy, they must have to pass by an RCE, which gives out results bases upon the input by the user. The idea was to call the ISO 360value – a third party over an iFrame where the user could have manually filled values they wanted to and then get the evaluation.

So, I came with an idea to automate the entire task. And took the permission to work on the same by TL. Though, he suggested that this implementation would be tough in the given time frame. But even though I initially had issues, I was able to successfully deliver this.

The user did not have to go to the hectic task of filling the values on the iFrame and then come up with results and then again navigate back to our webpage. It was now available on the fly to the user. The entire process not only decrease the effort for the user but even reduces the time to create a policy by 10%. Moreover, the accuracy was increased by 15% as the values where not manually entered.

This was then used by various clients in the Agency Link such as Ohio Mutual Insurance Group, Ameritrust Insurance (previously known as Meadowbrook).

It was moved to Production without any issue and I was honored with an Award for my implementation.

I feel that, for me this was my proudest moment :)
